

How Big Is My Organization's Document Remediation Problem?

Most organizations realize they have a problem related to document accessibility but they don't know how to gauge the size of the problem. Over the years, hundreds, thousands and in some cases, millions of documents have been added to internet and intranet sites by various content producers. Few, if any are created accessibly and, as a result, do not comply with current standards or regulations. OAT can remediate your documents and ensure compliance.

Search, Discover, Audit & Remediate

PDF remediation services have long been a time consuming, cost prohibitive and work intensive process. At Open Access Technologies (OAT) we've developed an automated remediation platform that identifies, inventories and delivers the highest quality in large volume PDF remediation.

Search & Discover

OAT has developed a fast, low cost service to help take the 1st step in identifying the size of the problem for any organization.

Audit

Once we know how many documents are on the website, and how many are tagged, the next step is to gain a better understanding.

Remediate

Once we know which documents should stay, and which should be removed, OAT will remediate your documents and ensure compliance.

Efficient, Scalable, Document Remediation

Using efficient web-crawling technology, OAT will identify the number of PDF documents on your various websites, provide an initial accessible health assessment for all PDF documents, perform an exhaustive audit to determine the level of compliance for all documents and remediate those documents that you want to keep on your sites. Improve your overall document accessibility health with OAT!
